Block Classic Workspaces

Creating a Teams group no longer creates a V1 Power BI Workspace 😊

Existing V1 workspaces are not affected

Attention, if you plan to delete V1 Workspaces first upgrade!
(otherwise O365 group is deleted)

Announcing you can now block classic workspace creation

Lukasz Pawlowski
Principal Program Manager

August 6, 2020

Today we're taking the next step in our roadmap for the new workspace experience. We've added a tenant setting for Power BI admins to choose if users can create classic workspaces. This helps organizations control workspace creation more effectively and prevent unwanted workspaces from appearing in Power BI when Office 365 groups are created.

Allowing Power BI Admins to block classic workspace creation

We've added a new Power BI tenant setting that can **block classic workspace creation**. By default, it's disabled, so there's no change to current behaviors for organizations.

Block classic workspace creation

Disabled for the entire organization

Users in the organization cannot create classic workspaces.

☒ Disabled

Apply

Cancel

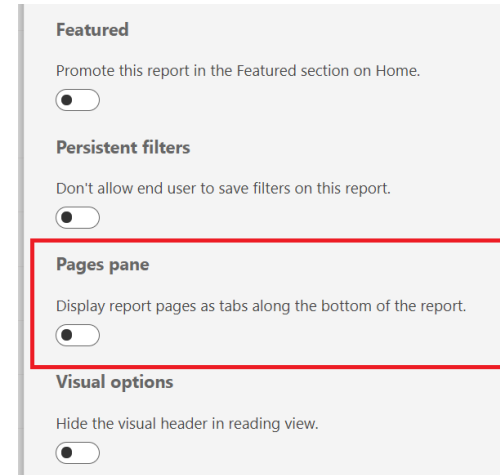

i This setting applies to the entire organization

Improved PowerBI New Look

Report Setting to decide if Pages pane is bottom or left

Tenant Level Setting to force New Look (week of 28/09)

Attention, End of October all users will be forced to “new look”

Tenant-wide new look settings

New look

Disabled for the entire organization

Users in this organization see the clean, modern controls of the new look of Power BI, and the new look toggle is turned off for all users. [Learn more](#)

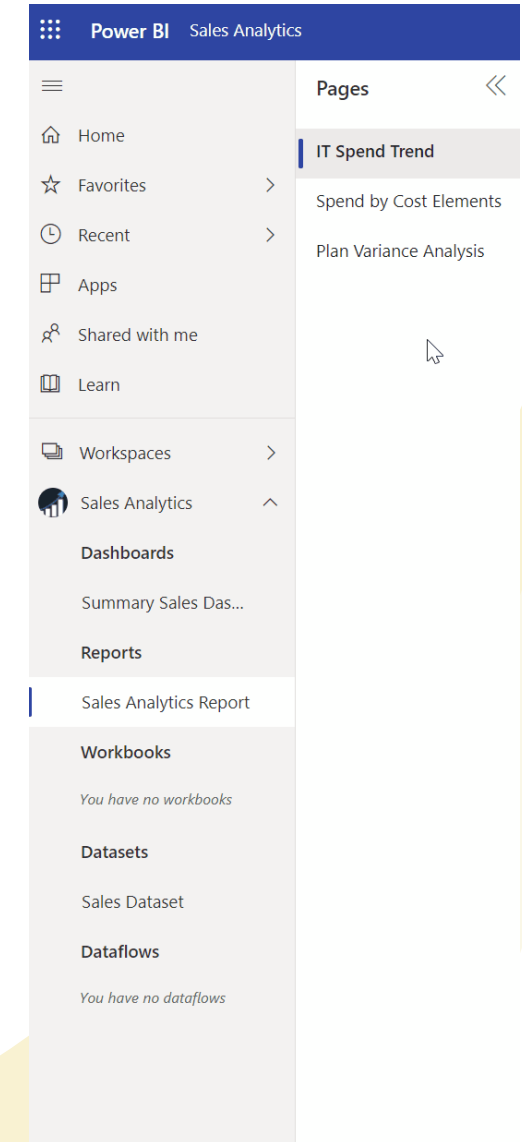

☐ Disabled

ⓘ If you disable this setting after it's been enabled, users will be able to turn off the new look.

DataFlows – Bring your DataLake at Workspace Level

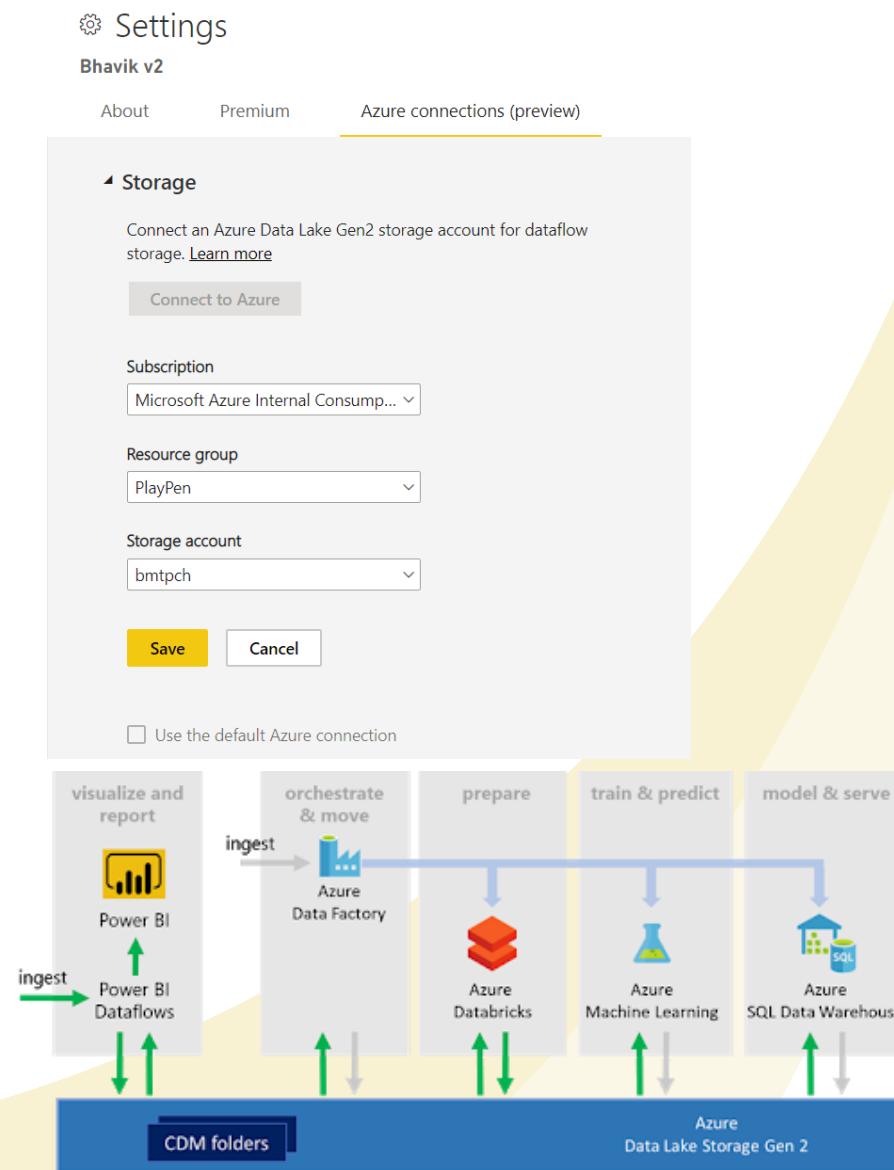

All DataFlows created under the workspace will be saved as CDM Folder in your own DataLakes

Scenarios

- Easy & fast track to build a datalake following standards (CDM folder)
- Easy provide data to Data Engineers / Data Scientists
- Data Governance

Attention, there is a know bug if you attached the lake using the old method

<https://powerbi.microsoft.com/en-us/blog/power-bi-dataflows-multiple-data-lakes-support/>

ADOMD/AMO Client .Net Core

Sample Scenarios

- Easy integration with Azure Functions v2
- Query/Manage Power BI Datasets / Analysis Services Models from other non windows platforms (ex: linux/macOS)

Building cross-platform solutions that connect to Power BI datasets

Kay Unkroth

Senior Program Manager

August 11, 2020

With XMLA endpoints available in Power BI Premium and the recent release of .NET Core versions of the Analysis Services client libraries (ADOMD.NET and AMO) in public preview, you can start building modern cross-platform Power BI solutions. You can leverage a single one-version-of-the-truth semantic model across Windows, Linux, and macOS, and cloud-oriented environments. For example, you can build a custom dataset deployment solution that uses a service principal to authenticate with Power BI and run it as an ASP.NET Core app in Azure App Service on Linux. Of course, you can also use Azure Functions v2, PowerShell Core, and other modern environments to connect to and manage your Power BI datasets.

The new NuGet packages for .NET Core are essentially equivalent to the existing ADOMD.NET and AMO client packages for the .NET Framework. This can help to make a migration of existing applications from the .NET Framework to .NET Core straightforward.

Note that the ADOMD.NET and AMO libraries target .NET Core 3.0 and above. As .NET Core evolves and adds more capabilities, the client libraries might target a higher version by the time they reach general availability (GA).

You can find the preview packages at Nuget.org via the below links, and we will continue to publish new preview versions on a regular basis. As always, your feedback is very much appreciated.
